

GARAGE SECURITY AUDIT GUIDE

Use this compact checklist to evaluate and secure your residential garage in minutes

☒ Physical & Structural Layers

- ☐ **Door Closes Fully:** Primary physical security barrier.
- ☐ **Safety Sensors:** Reversal mechanism works correctly.
- ☐ **Emergency Release:** Functional yet protected from coat-hanger bypass.
- ☐ **House-to-Garage Door:** Interior entry remains locked.
- ☐ **Windows Secured:** Contents hidden from view.
- ☐ **Side/Pedestrian Doors:** Secondary points reinforced.

☒ Smart Tech & Operational Layers

- ☐ **Modern Opener:** Rolling-code encryption enabled.
- ☐ **No Exposed Remotes:** Clickers kept out of parked cars.
- ☐ **Motion Lighting:** Adequate outdoor visibility at night.
- ☐ **Smart Alerts:** Real-time notifications for open/close states.
- ☐ **Hardware Maintenance:** Tracks, springs, and cables inspected.
- ☐ **Permissions Cleaned:** Lost remotes/old accounts removed.

💡 Key Takeaway

Important: There isn't one single solution to home security. A layered approach is always better: secure your interior access doors, upgrade your opener, protect your manual release mechanisms, improve lighting, manage digital remote access, and utilize smart monitoring.

🔧 Next Steps for Your Smart Garage Setup

1. **Audit Annually:** Run through this checklist at least once a year as part of your seasonal home-maintenance routine.
2. **Automate Alerts:** If you use a smart garage controller, set up automated reminders for doors left open past a specific timer threshold.
